2	Siemens provides products and solutions with industrial cybersecurity function that support the secure operation of plants, systems, machines and networks. In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial cybersecurity concept. Siemens' products and solutions constitute one element of such a concept. Customers are responsite for preventing unauthorized access to their plants, systems, machines and networks. Such systems, machines and components should only be connected an enterprise network or the internet if and to the extent such a connection necessary and only when appropriate security measures (e.g. firewalls and/onetwork segmentation) are in place. For additional information on industrial cybersecurity measures that may be implemented, please visit www.siemens.com/cybersecurity-industry. Siemens' products and solutions undergo continuous development to make them more secure. Siemens stron recommends that product updates are applied as soon as they are available and that the latest product versions are used. Use of product versions that ar no longer supported, and failure to apply the latest updates may increase customer's exposure to cyber threats.
